

Accelerating Simplicity

At ID Technologies we have a clear mission – to make it simpler for our customers to buy and use IT that’s fit for their purpose. We don’t say that IT projects are ever easy – IT is hard to do well, the stakes are often high and technology is evolving rapidly. But there is much we can do to ease our customers’ experience and minimize time-to-value. We call our process “Accelerating Simplicity.”

Our Guiding Principles

Differentiation

We work with proven capabilities we know will outperform the market and at lower cost.

Time-to-Value

We make the value of IT spend more quickly accessible to the customer.

Customer Relevance

We work only with partners whose products and approach align with the unique contexts and goals of our customers.

Archon Suite | EL 8000 – *Enable the Art of the Possible*

All missions require fast, secure, reliable communications. Success requires attention to where data is created, how it moves across the network, and where it lands.

At the edge. Personnel need an ultra-secure mobile device with an operating system hardened against cyber-attacks. Cryptographic services and security policy configured in hardware rather than software. Connection to untrusted wired or wireless networks only via a wired connection to a retransmission device, as stipulated in the NSA Commercial Solutions for Classified (CSfC) Mobile Access Capability Package (MA CP).

Across the WAN. To convert data from local sensors to actionable intelligence, tactical teams need fast access to analytics servers that may be thousands of miles away. In areas with high WAN latency, teams can’t perform time-sensitive analytics such as facial recognition. Throwing more bandwidth at the problem is prohibitively costly and doesn’t guarantee reliable performance.

To the cloud. IDC projects that the world will produce 300% more data from 2020 to 2025 than it did in the previous five years. Agency IT teams need the scale and operational ease of public cloud storage—but with the security and control of an on-premises deployment.

Archon Solution Suite and the EL 8000—Achieve CSfC-compliant communications from the edge to the cloud.

- The EL 8000 deployed with Archon Manager provides an efficient tactical CSfC solution that provides enterprise control and manageability in the most difficult of environments.
- The Archon ZV, CSfC compliant end-user device with its military grade RTOS, provides a seamless user experience while adhering to the strictest of CSfC controls.
- Archon Proxima provides rapid actionable analytics on large data sets where they are needed while data, servers, and operators can be thousands of miles apart.
